

FortiPhish™

Fortinet's Phishing Simulation Service

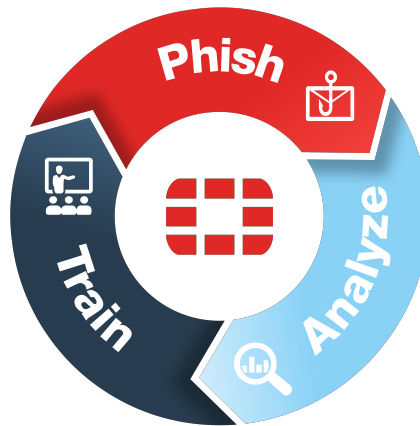

Email remains a primary threat vector for malicious actors looking to gain access to your environment to steal sensitive data, gain access to banking accounts or lay siege to data through ransomware.

In fact, according to Verizon's Data Breach Investigations Report 2020, 96% of phishing and pretexting (where a threat actor uses a convincing and plausible pretext or story to con an unsuspecting user to do something for the actor), including spear and whale phishing of executives - arrived via email.

These social attacks have resulted in reputational damage and large financial losses due to compromised data, intellectual property loss, and unauthorized fund transfers.

Security awareness training, for those organizations that have a program in place, can only go so far. Employees come and go and while your users mean well, they often forget the lessons learned through annual online courses and other instruction.

FortiPhish helps you address the risk posed by uninformed users and turns them into forward-operating sensors on the lookout for potential threats. FortiPhish is an advanced phishing testing service using the latest examples seen in the wild.

The Case for FortiPhish

Problem

Zero day malware and phishing threats delivered over email and the web may result in data loss, compromise, and business disruption.

Solution

Testing your employees or users with real-world simulated phishing attacks works to prepare them to defend your organization against social-based attacks.

Benefits

- Phishing simulation tests the ability of users to identify potential email-borne threats.
- Assess the level of vigilance across your users through campaigns.

OVERVIEW

FortiPhish is a cloud-delivered phishing simulation service. User awareness of the risk posed by malicious emails and social engineering efforts is best developed through regular testing against real-world simulated phishing threats.

FortiPhish phishing simulation uses the Fortinet FortiGuard Lab's deep knowledge of phishing techniques to allow you to target your users with highly credible phishing campaigns.

FortiPhish provides rich analytics to help administrators assess the susceptibility of users to phishing and related social engineering attacks, identifying users who may need support to improve behavior in the organization's anti-phishing efforts.

About DocuSign
Sign documents electronically in just minutes. It's safe, secure, and legally binding. Whether you're in an office, at home, on-the-go -- or even across the globe -- DocuSign provides a professional trusted solution for Digital Transaction

FortiPhish Features

Cloud-based Phishing Simulation Service

- Test user response with pre-defined multi-language phishing mails
- Test user likelihood of clicking on suspicious links and divulging information

Management Reporting

- Capture email open rates and visualize campaign analysis
- Track improvement over time per user group

✓ PHISH

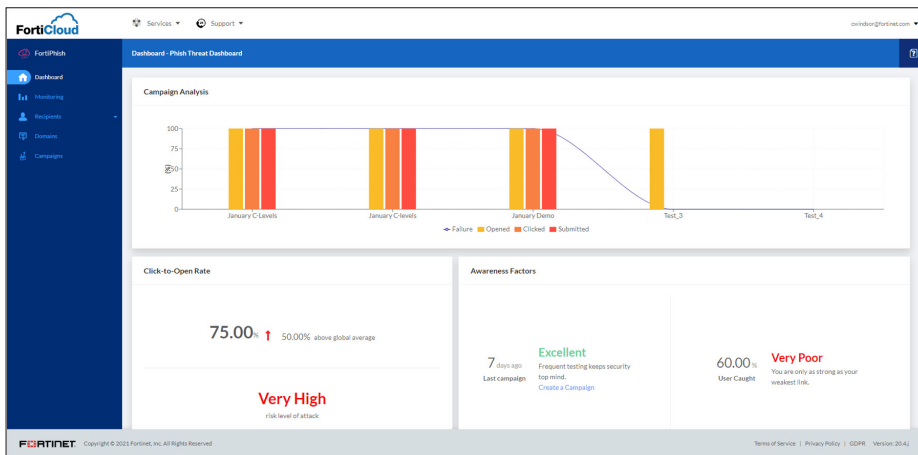

Test awareness and vigilance across your users through real-world simulated phishing attacks, while reinforcing proper practices at the point of click.

✓ ANALYZE

Analyze results and visualize program trending while identifying at-risk users and areas for improvement. Use results to adapt future training, further reinforcing vigilance across your organization.

✓ TRAIN

Train your users on the risk posed by email-borne threats including phishing, spear phishing, whale phishing, pretexting, impersonation, and business email compromise — and how to spot them.
